Declaring Variables

break	default	func	interface	select
case	defer	go	map	struct
chan	else	goto	package	switch
const	fallthrough	if	range	type
continue	for	import	return	var

Variable names:

- Start with a letter
- Can't be Go keyword
- Can't contain spaces
- Can't contain special characters

Good practice:

- Use meaningful names
- Keep names short
- Use camelCase

Recap

Recap

At package level

`var <name> <type>`

**At package level
variables are *global***

Inside functions

`<name> := <value>`

**Go supports
*type inference***

**Go passes variables
by value (copy)**

**Pointers let you pass
*by reference***

**Constants are
immutable variables**

**Go can access and
manipulate
environment
variables**
